A re-usable shell script with arguments. Let's make hello.sh more complicated. Instead of just echoing Hello world, let's design the script so that it will say Hello to a specific value (i.e. someone's name). And we'll make the script sound more excited. Here's the proposed usage: `bash hello.sh Dan HELLO DAN`

Creating basic shell scripts - compciv

Put UNIX commands in the new empty file, like you would enter them on the command line. As discussed in the previous chapter (see Section 1.3), commands can be shell functions, shell built-ins, UNIX commands and other scripts.. Give your script a sensible name that gives a hint about what the script does.

Creating and running a script

Shell money is a medium of exchange similar to coin money and other forms of commodity money, and was once commonly used in many parts of the world. Shell money usually consisted of whole or partial sea shells, often worked into beads or otherwise shaped. The use of shells in trade began as direct commodity exchange, the shells having value as body ornamentation.

Shell money - Wikipedia

The shell script automatically determines the data type used for the variable value. Variables defined within the shell script maintain their values throughout the life of the shell script but are deleted when the shell script completes. Just like system variables, user variables can be referenced using the dollar sign: `$ cat test3 #!/bin/bash`

How to Use Variables in Shell Scripting

Cloud Shell uses tmux by default, which allows it to improve persistence across browser tab sessions. For example, if you refresh the Cloud Console in a tab or connect to your Cloud Shell from a different machine, the session state will not be lost. Cloud Shell supports the default tmux key bindings.

Dataflow templates use runtime parameters to accept values that are only available during pipeline execution. To customize the execution of a templated pipeline, you can pass these parameters to functions that run within the pipeline (such as a DoFn).. To create a template from your Apache Beam pipeline, you must modify your pipeline code to support runtime parameters:
